No neural network: Fourier representation and postprocessing control
A. Hydrogen target, Ti = 60 eV; M = 80
Original Gaussian
Exact-label inverse
Clipped + normalized
$v_{max}f(v)$
v/v_{max}
B. Clipping removes cancellation in v²-weighted tails
Cumulative signed second moment (eV)
v/v_{max}
C. All species, same ne = 3.5e26 m⁻³; spectrum L2 = 14.16%
Original f → PV
Exact label → inverse → clipnorm → PV
Normalized intensity
Wavelength (nm)
D. Tiny VDF L2 does not ensure accurate clipped moments
Original
Raw signed inverse
Clipped + normalized
Temperature (eV)
Electron
Hydrogen
Carbon
