Why the top becomes bright: the same latest data on two intensity scales

Latest saved values
Fixed scale over the entire time series

Same data, divided by each row peak
The left column of the previous PV figure

(a) Experiment
Time (ns)

(b) Simulation without probe
Time (ns)

(c) Simulation with probe
Time (ns)

$\Delta\lambda = \lambda - 263.3$ nm

Counts after subtracting 1691

Digitized intensity

Intensity / row peak

At 1.5984 ns
Median = 159; peak = 297

At 1.5984 ns
Normalized median = 0.535

At 1.5995 ns
Median = 0.0041754; peak = 0.0041754

At 1.5995 ns
Normalized median = 1.000

At 1.5995 ns
Median = 0.0041754; peak = 0.0041754

At 1.5995 ns
Normalized median = 1.000
